New to Data Vault?

It's a unique data modeling technique that uses sets of hubs, links and satellites to build Data Warehouses. The technique is based upon the paradigm:

Separate things that change from those that do not change.

A Data Vault modeled Data Warehouse will help companies to handle their data in a constantly moving and changing environment.

What does our class offer?

This is a hybrid class, utilizing 3 days in the classroom plus 2 weeks of online, on-demand video lectures and labs.

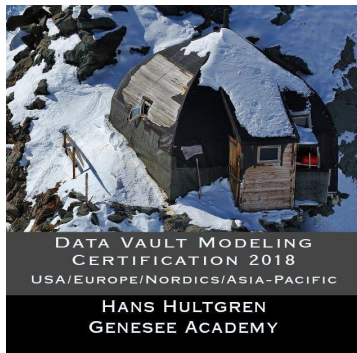

During the 3 days in the classroom students are purely focused on guided modeling with interactive group lab work. At the end of the training there will be a 3 hour hand written exam. This is designed to analyze the level of knowledge gained by each student.

*To gain certification, this exam must be passed.

Why Genesee Academy?

Genesee Academy is a world leader in **training**, **seminars**, and **advising** for data warehousing, data vault, ensemble modeling, data integration, and business intelligence.

At Genesee Academy, we are committed to helping professionals develop the skills and knowledge necessary to pursue opportunities in today's fastest growing career fields.
